The germinal center (GC) is a transient lymphoid tissue microenvironment that fosters T cell–dependent humoral immunity. Within the GC, the B cell–specific enzyme, activation-induced cytidine deaminase (AID), mutates the immunoglobulin locus, thereby altering binding affinity for antigen. In the absence of AID, larger GC.

Germinal centers are markedly (3-5x) larger than normal, with indistinct margins; are composed of follicular mantle lymphocytes and extensive follicular dendritic cells; Tingible body macrophages are also present; Associated with more typical germinal centers; Large numbers of T cells are present; May.

14 Aug 2015 . Germinal centers (GCs) are the primary site at which clonal expansion and affinity maturation of B cells occurs. B cells encounter antigen and receive T cell help in the GC light zone (LZ) and then migrate to the dark zone where they proliferate and undergo somatic mutation before cycling back to the LZ for.

The thirteenth novel in Émile Zola's great Rougon-Macquart sequence, Germinal expresses outrage at the exploitation of the many by the few, but also shows humanity's capacity for compassion and hope. Etienne Lantier, an unemployed railway worker, is a clever but uneducated young man with a dangerous temper.

Publié en 1885, *Germinal* fait partie de la série Rougon-Macquart. Il est la treizième œuvre de cette série de vingt. Roman de la lutte des classes et de la révolte sociale, *Germinal* est un vibrant plaidoyer en faveur des déshérités et des exploités. Portée par un puissant souffle lyrique, cette œuvre épique et poignante.

Germinal centers are oligoclonal clusters of B cells responding to antigen, typically in T cell-dependent immune responses (Thorbecke et al., 1994). B cells undergo intense clonal expansion in germinal centers, where they ultimately differentiate into long-lived plasma cells or memory B cells. Germinal centers are commonly.
